Dear Hiring Team at Anthropic,

Re: Applied AI Engineer

Dear Hiring Manager,

I'm excited to apply for the Applied AI Engineer role at Anthropic, where I can leverage my expertise in developing bespoke LLM solutions to drive the adoption of frontier AI. As a Forward Deployed Engineer with experience in production LLM agents (Fortinet RAG), I'm confident in my ability to architect innovative solutions that meet the technical requirements of top enterprises across Japan.

In my current role at Fortinet Technologies Inc., I led the development of an agentic RAG diagnostics system for enterprise network telemetry. This system utilized LLM plans to invoke APIs and verify hypotheses via structured function calling, producing autonomous root-cause analysis. I customized the pilot from a hackathon prototype to a production deployment, reducing mean resolution time by 70%. I also scaled OpenSearch ingestion pipelines from 50 to 2,000 events/sec (40x) using Golang and deployed edge ML inference via ONNX Runtime.

I'm drawn to Anthropic's mission of creating reliable, interpretable, and steerable AI systems. Your commitment to safe and beneficial AI aligns with my passion for using technology to advance the goal of trustworthy AI. I'm excited about the opportunity to collaborate with the Sales, Product, and Engineering teams to innovate and differentiate Anthropic's AI systems.

I look forward to discussing my qualifications further and exploring how I can contribute to Anthropic's mission.

Sincerely, Vedaang Chopra

Sincerely,

Vedaang Chopra
