Dear Hiring Team at Scaleai,

Re: Frontier Agents Engineer (Applied AI)

I am excited to apply for the Frontier Agent Engineer (Applied AI) role at Scale AI, as highlighted by my recent research experience in building a closed-loop agentic pipeline for parametric CAD code generation using a large language model (LLM) and execution environment.

In this role, I will leverage my expertise in agentic AI, LangGraph, and LLMs to design and deploy production AI agents that combine frontier models with structured knowledge, retrieval, traditional machine learning, and enterprise software. My experience in designing geometric verification components and maintaining a 202-test evaluation harness with VLM-based visual judgment and RAG-augmented prompt construction will be invaluable in architecting intelligent systems that combine LLMs, traditional machine learning, and enterprise data into reliable production workflows.

Scale AI's mission to help organizations build and deploy reliable production AI applications aligns with my research goals, and I am excited about the opportunity to work directly with enterprise customers to understand their business, data, and operational challenges. My experience in leading development of an agentic RAG diagnostics system and scaling OpenSearch ingestion pipelines from 50 to 2,000 events/sec using Golang will enable me to build human-in-the-loop workflows that effectively combine AI automation with expert oversight.

I am confident that my skills and experience make me a strong fit for this role, and I look forward to discussing my application further.

Sincerely,

Vedaang Chopra
